

This information will be very helpful for me as I look for sponsors and supporters for this program, try to recruit new coaches/teams and continue to improve the program. Please use additional paper if needed.

1. Did your team attend the awards ceremony?
If no, we will mail any student medals to you with the certificates and other information.
2. I very much appreciate that Science Olympiad is a lot of work - why do you do it??
3. If you were a new team this year - how did you hear about the program?
4. SO has been around for 20 years in Utah, why did you decide to have a team this year?
(If we are doing something "right" we want to know so that we can try to do it even better - if not maybe there is something we can do to get more teams)
5. What do you know now that you wish you had known a few months ago?? (We will add this insight to our tips for new coaches web page)
6. What will you do differently next year? (we will compile these and post them for others to benefit)
7. What would be most useful in a training video? (Please understand that we can't make one each year, so specifics about events might not be the best expenditure of our efforts).
8. Each year in the packet we send a few weeks before the tournament, we include 1-2 invitations for you to use to invite an administrator or potential donor to the event. Do you use these? Please be honest, this is a bit of effort and expense and we will stop doing it if they are not used.

9. Would you be interested in a 2 day summer SO coaches training workshop? (in early August) - we have run this for the past 2 summers and might again this year IF there is sufficient interest.
10. What were the highlights of Saturday for your students? What did they talk about in the bus or car on the ride home?
11. What were your student's favorite events?
12. Were there any events that you especially liked or did not like - please explain
13. Any other anecdotes you can share - these can be very helpful in getting donors interested. I especially would like to know if Science Olympiad has engaged students who might not otherwise have gotten involved with science.
14. Has SO helped any of your students learn about/decide upon careers in science?
15. Why would you encourage other teachers to do this?
16. What would you tell a potential donor regarding why they should sponsor Science Olympiad?
17. Do you have any photos/video you can share – either for our video, training information, web site?
18. How did the Dee Event Center base camps work out – suggestions for improvement?
19. Should all teams be moved to the Dee Event Center?
Should we give teams the option of LL or DEC?
